— WE CREATE LIGHT —

Office Ideal Light EyeProtection Silver

Function

- 1.LED panel light
- 2.Multi - direction axis
- 3.Main key (Switch / mode switch / brightness adjustment)
- 4.Read and write mode indicator
- 5.Fill light mode indicator
- 6.Painting mode indicator
- 7.Marked position
- 8.Auxiliary light emitting region
- 9.Auxiliary light key
- 10.Power input port
- 11.AC adapter

Instructions

1 On/Off

- 1.Long press main switch button for 1 second, then the lamp will be on.
- 2.Long press the main switch button again for 1 second, then the lamp will be off.

2 Switching Between Three Modes

When the lamp is turned off, it is in reading mode by default. Short press the main button, then it will switch into supplementary lighting mode. Short press on the main switch button again, then it will turn into drawing lighting mode. The entire process can be repeated by continuing short pressing the main switch button.

Note: When the plug is not pulled, even if the lamp is turned off, its memory function help bring it back to the mode and the same degree of brightness the last time it was set to when it is turned on.

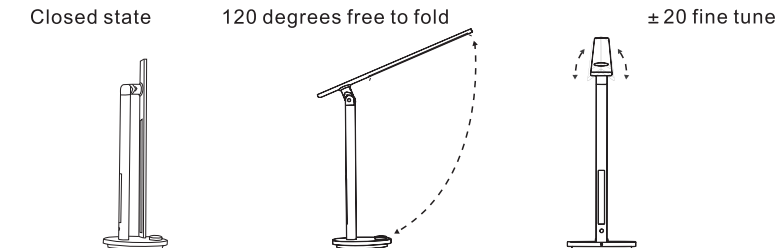

3 Brightness Adjustment

You can increase the brightness of the lamp by turning the main switch button clockwise. Likely, you can reduce the brightness of the lamp by turning the main switch button counter-clockwise (the main switch button is).

4 Auxiliary Light Switch

Short press the #9 button, the ambient light will be turned on(in high brightness mode). Short press the button again, the ambient light will switched into low brightness mode, which serves as night light. Short press the button for the third time, the ambient light will be turned off. The adjusting process can be repeated by pressing the button again and again.
